| <b>Beschreibung</b><br>When device is updated via CAN, it jumps into PhonyBL afterwards making the CAN flash procedure useless.<br>1) Keep CAN active and start phonyBL manually by button<br>2) Flash intern+extern in one step<br><br>1) Sounds goot. Keep CANFLasher as is without device-dependant behaviour. When just flashing firmware the device would still end up inaccessible and CANFlashing would throw error telling device disapeared. |                     |                             |             |
